(A) A website maintains records of users who have registered on the platform and the status of confirmation requests sent to them. A confirmation request can either be successfully completed or may expire without completion. For each registered user, calculate the confirmation rate, which is defined as:

$$\text{Confirmation Rate} = \frac{\text{Number of Successful Confirmations}}{\text{Total Confirmation Requests}}$$

If a user has never received any confirmation request, their confirmation rate should be considered **0**.

Display the user ID along with the confirmation rate rounded to **2 decimal places**. The result can be returned in any order.

```
Select
  round(
    avg(
      CASE
        when action='confirmed' then 1
        else 0
      end
    ),2
  ) as confirmation_rate
from signups as s
left join
confirmations as c
on
s.user_id=c.user_id
group by s.user_id;
```

(B) Problem Statement

A ride-booking company maintains information about trip requests and the users involved in those trips. Some users may be restricted from using the platform, while others are active participants. Each trip can either be completed successfully or cancelled by one of the participants.

For each day between **2013-10-01** and **2013-10-03**, determine the proportion of canceled trips among all valid trips. A trip should be considered valid only when both the customer and the driver associated with that trip are active users. The final result should display the date and the calculated cancellation rate rounded to two decimal places.

We need to calculate:	But only consider trips where:	Date between
Cancellation Rate	Client is NOT banned	2013-10-01
=	AND	And
	Driver is NOT banned	2013-10-03
Cancelled Trips		

Total Valid Trips		

Select

```

t.request_at as day,
round(
AVG(
case
when t.status in
(
'cancelled_by_driver',
'cancelled_by_client'
)
then 1
else 0
end
),2
) as cancellation_rate
from trips as t
join
users as c
on
t.client_id = c.users_id
join users as d
on

```

```
t.driver_id = d.users_id  
where c.banned = 'No'  
and  
d.banned = 'No'  
and  
t.request_at between  
'2013-10-01' and  
'2013-10-03'  
group by t.request_at;
```
